

FEATURES & BENEFITS

INTRODUCING THE MOST SUSTAINABLE WAY TO GET PRODUCE FROM YOUR FIELD TO THEIR FRIDGE

The RAPID ROPER® Sustainable Ventilated Containment System is designed to optimize load containment, maintain ventilation, and significantly reduce material and energy costs. Relevant applications include fresh produce, dairy, and certain frozen food applications.

In tests conducted on a typical citrus pallet in an operation producing 500 pallets per day year round, Rapid Roper achieved the following:

- 75% greater load stability: Proven in multiple transport simulation tests.
- 72% reduction in packaging material costs: \$335K in packaging material cost savings plus \$5K in tipping fees for material shipped to the landfill.
- 91% reduction in packaging waste: 5.40 lbs of cornerboard and straps used on each pallet produced annually 783K lbs of waste sent to the landfill. This was replaced with .46 lbs of stretch wrap producing 67K lbs of recyclable material.

The superior strength of Rapid Film provides a high strength wrapping web that resists punctures, tears and breaks.

Rapid Roper provides both superior ventilation and containment, along with the ability to reduce or eliminate cornerboards and strapping.

- At least 50% reduction in greenhouse gas generation: The savings is a combination of reduced material usage and significantly enhanced throughput savings. (Two to four times more pallets can be wrapped between roll changeovers.)
- Rapid Film is recycle-ready. Customers are currently recycling it back into industrial films used for wraps and bags. Thus, non-recyclable palletizing materials can be eliminated.
- Routine maintenance and service is provided at no cost to you.

Ready To Learn More?

We'd love to tell you more, answer any questions, and set up a trial in your facilities. That way, you can see for yourself how Rapid Roper® can enhance your supply chain sustainability efforts by reducing load failures, along with reducing your economic and environmental costs.
